This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The strength of a message can affect whether or not an individual tells the truth.
- An experiment measures how message type affects a sender's intrinsic lie aversion.
- “Strong” vs. “weak” messages significantly promote truthfulness in the experiment.
- Stronger messages are found to increase truth-telling by 30 percentage points.
- Differential aversion to “weak” vs. “strong” lies can be socially advantageous.
