This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We augment a standard allocation experiment to study the conflict between granting others the freedom to choose and restricting their choices to benefit environmental charity.
- We observe that most allocators force others to donate a positive, though low, amount.
- Unlimited freedom of choice is rejected by the majority of the participants.
