This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- Short-horizon planning model can account for consumption hump in general equilibrium.
- Age of consumption peak is insensitive to interest rate and Social Security.
- Can also calibrate model so existing Social Security program is optimal.
- Competing mechanisms fail to replicate consumption peak and optimality of Social Security.
