This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- Use revealed difference relation to characterize heterogeneity of preferences
- Analyze the structure of the revealed preference relation to uncover the number of types in the population
- Using experimental data from a random sample of the Dutch population, we find that 1,182 individuals can be divided into 131 different preference types
