This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

### Highlights

- We study network formation in a laboratory experiment.
- We test myopic and farsighted notions of pairwise stability.
- Results reject both of these extreme theories.
- Empirically stable networks are immune to deviations of short length.
- The evidence is interpreted as an instance of limited farsightedness.
