This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- Average honesty of resident nationals of 15 countries was measured in two experiments
- There are large cross-country differences in honesty
- Honesty correlates at country level with GDP and Protestantism
- Participants' expectations about honesty in different countries were also elicited
- Expectations were not correlated to reality, but driven by cognitive biases
