This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- > Prior work shows that experiencing warmth makes global warming more plausible
- > This research conceptually replicates that *visceral fit* effect
- > We show that increased heart rate is associated with greater global warming belief
- > The effect occurred in three of four studies and was small overall (d = 0.20)
