Title: Changes in neural activation underlying attention processing of emotional stimuli following treatment with positive search training in anxious children

Authors: Allison M. Waters, Yuan Cao, Rachel Kershaw, Georg M. Kerbler, David H.K. Shum, Melanie J. Zimmer-Gembeck, Michelle G. Craske, Brendan P. Bradley, Karin Mogg, Daniel S. Pine, Ross Cunnington

PII: S0887-6185(17)30296-7
DOI: <https://doi.org/10.1016/j.janxdis.2018.02.004>
Reference: ANXDIS 2005

To appear in: *Journal of Anxiety Disorders*

Received date: 23-6-2017
Revised date: 28-2-2018
Accepted date: 28-2-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Changes in neural activation underlying attention processing of emotional stimuli following treatment with positive search training in anxious children

Highlights

Assessed neural correlates of treatment outcome following positive search training

Found pre- to post-treatment reductions in anxiety symptoms and neural reactivity to emotional faces within a broad neural network

Neural reactivity to the threat-bias contrast reduced from pre- to post-treatment in the mid/posterior cingulate cortex
