This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

INVESTIGATING MEMORY AMPLIFICATION IN THE LABORATORY

Highlights

- . We investigated whether memory amplification occurs in the laboratory.
- . PTSD symptoms were positively related to an amplified memory of a trauma analogue.
- . Re-experiencing the trauma was associated with amplification among a subgroup.
- . Our findings are consistent with a reality-monitoring explanation for amplification.
