Title: From Coarse to Fine: Interactive feature processing precedes local feature analysis in human face perception

Authors: Judith C. Peters, Rainer Goebel, Valerie Goffaux

PII: S0301-0511(18)30568-4
DOI: <https://doi.org/10.1016/j.biopsycho.2018.07.009>
Reference: BIOPSY 7564

To appear in:

Received date: 25-10-2017
Revised date: 19-7-2018
Accepted date: 31-7-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

From Coarse to Fine: Interactive feature processing precedes local feature analysis in human face perception

Keywords: face perception; ERP; face features; holistic processing; neural adaptation

Highlights:

- The Interactive (IFP) versus Local (LFP) Feature Processing of faces depend on feature discriminability.
- ERP results show that IFP precedes LFP by 120 ms in a congruency paradigm.
- Findings support Coarse-to-Fine models for face perception.
