This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

RUNNING TITLE: GENDER AND SOCIAL EVALUATIVE FEEDBACK**Don't judge me: Psychophysiological evidence of gender differences to social evaluative feedback**

Marie-Anne Vanderhasselt*, Rudi De Raedt, Selene Nasso, Louise Puttevils, Sven C. Mueller
Ghent University

*** Corresponding Author:**

Marie-Anne Vanderhasselt, Ph. D., Department of Psychiatry and Medical Psychology, Ghent University. Email: MarieAnne.Vanderhasselt@Ugent.be

Total number of words (abstract, references, tables and figures not included): 4812

Highlights

- Males respond more with other-focused attention whereas women more with self-focused attention following negative social feedback.
- Males have more pupil dilatation when regulating social feedback provided by the opposite gender.
- Women were more emotional and less able to regulate emotional responses following social feedback.
