This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

- This paper compares a biolinguistic approach to language acquisition and a usage-based approach.
- We demonstrate that the biolinguistic approach is both descriptively and explanatorily more adequate.
- The experimental findings show that children amalgamate superficially different linguistic phenomena.
- These findings are predicted on the biolinguistic approach, but resist explanation on the usage-based approach.
