This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Previous research on AUDs/SUDs and FER showed inconclusive results
- Our meta-analysis found that people with AUDs/SUDs had worse FER relative to controls
- We found high heterogeneity, but no risk of publication bias across studies
- Future research should clarify the role of specific AUDs/SUDs clinical issues
