This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Sale et al., 1

Highlights

- Non-invasive brain stimulation is increasingly used in neurology.
- The clinical efficacy of these stimulation approaches remains poor.
- Imaging connectomics can help identify where and how to stimulate.
- The treatment of neurological conditions will benefit from integrating connectomics and brain stimulation.

Imaging human brain networks to improve the clinical efficacy of non-invasive brain stimulation
