Accepted date: 31-12-2014

Please cite this article as: Mansur, R.B., Brietzke, E., McIntyre, R.S., Is there a “Metabolic-Mood Syndrome”? A Review of the Relationship Between Obesity and Mood Disorders, *Neuroscience and Biobehavioral Reviews* (2015), <http://dx.doi.org/10.1016/j.neubiorev.2014.12.017>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The relationship between obesity and mood disorders is bidirectional and convergent
- It has been proposed that this co-occurrence represents a distinct illness subtype
- However, there are significant inconsistencies in the studies of this association
- We explore the phenotypic and etiological heterogeneity of these illnesses
- We discuss using domain-specific and dimensional approaches in subtyping strategies
