Title: The two-process theory of face processing:
Modifications based on two decades of data from infants and
adults

Author: Mark H. Johnson Atsushi Senju Przemyslaw
Tomalski

PII: S0149-7634(14)00259-0
DOI: <http://dx.doi.org/doi:10.1016/j.neubiorev.2014.10.009>
Reference: NBR 2051

To appear in:

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- We outline the Johnson & Morton (1991) two-process model of face processing development
- We present modifications based on two decades of research with humans and other primates
- We propose an extension of the model to eye contact detection
- We outline an extension of the model to subcortical face processing
- We conclude with discussion of outstanding caveats and future directions of research
