EMBODIED COGNITION AND THE CEREBELLUM: Perspectives from the Dysmetria of Thought and the Universal Cerebellar Transform theories

Xavier Guell, John D.E. Gabrieli, Jeremy D. Schmahmann

PII: S0010-9452(17)30225-3

DOI: [10.1016/j.cortex.2017.07.005](https://doi.org/10.1016/j.cortex.2017.07.005)

Reference: CORTEX 2065

To appear in: *Cortex*

Received Date: 14 March 2017

Revised Date: 23 June 2017

Accepted Date: 1 July 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

EMBODIED COGNITION AND THE CEREBELLUM:**Perspectives from the Dysmetria of Thought and the Universal Cerebellar Transform theories**

Keywords: Cerebellum. Embodied cognition. Dysmetria of thought. Universal cerebellar transform. Cerebellar cognitive affective syndrome.

HIGHLIGHTS

- The Universal Cerebellar Transform (UCT) strengthens embodied cognition.
- Embodied cognition supports the UCT theory.
- Embodied cognition supports the generalization of the UCT to other brain regions.
- Embodied cognition might shape future definitions of the UCT.
