This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

#### Highlights

- This study addresses the socioeconomic inequality in obesity in Indonesia.
- Socioeconomic inequality in obesity has been decreasing over the last two decades.
- Lower income groups have begun to become overweight and obese.
- Excessive weight is not affecting only the wealthier segments of the population.
- A large part of the Inequity can be explained by wealth and sanitary conditions.
