This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Recent college graduates who join the U.S. government in recessions receive a positive wage benefit.
- This positive wage effect lasts for at least ten years and extends beyond college graduates.
- This result is robust to alternative samples and model specifications.
- Agency occupation composition and job matching contribute to explaining this finding.
