This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper proposes a specification test to local misspecification for generalized empirical likelihood (GEL) estimator.
- The proposed robust test statistics incorporate a weakly dependent time series variables.
- The proposed test is asymptotically follows a central chi-square distribution under local misspecification.
- A Monte Carlo simulation verifies the usefulness of the proposed test.
