This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

# On Bootstrap Implementation of Likelihood Ratio Test for a Unit Root

ANTON SKROBOTOV\*

*The Russian Presidential Academy  
of National Economy and Public Administration*

June 17, 2018

Highlights:

- We consider bootstrap likelihood ratio (LR) test for a unit root
- Standard LR test has serious size distortion
- Bootstrap LR test with autoregressive recolouring has better performance than standard LR and bootstrap M tests
