This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Identification of Common Factors in a Panel Data Growth Model

### Highlights

- The paper uses a basic panel growth model and retrieves unobserved common factors.
- We investigate whether these unobserved common factors can be identified.
- Our empirical findings suggest that the common factors can be associated by a group of institutional variables and life expectancy.
