This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- On average, women score lower on financial literacy than men
- The gender gap in financial literacy is more pronounced in more developed countries
- Personal characteristics such as education explain only some of the gap
- A larger part may be due to different socio-economic environments across countries
