This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights:**

- > Equilibrium Climate Sensitivity (ECS) is as important as it is uncertain.
- > Cox et al. (2018) appear to have found a good way to constrain ECS.
- > That ECS constraint may largely be a result of the climate-econometric assumptions.
- > We explore different distributions that lead to wildly different ECS results.
