This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- First model to study the dynamics of cultural traits in an endogenous network
- Parents bias their children's network by identifying positive and negative role models
- Dynamics of cultural traits always converge to a melting pot society
- The long-run trait depends only on initial network position and preferences
- Socialization incentives lead to slow convergence explaining persistence of traits
