This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- First estimates of level of bipolarization of global income distribution
- Relative bipolarization declined over 1975–2010 but absolute bipolarization went up
- The trends in global bipolarization mirror those in global inequality
- The global income distribution is now lognormal rather than twin-peaked
