Accepted date : 5 January 2018

Please cite this article as: Deng L., Ali Khan M., On Mitra's sufficient condition for topological chaos: Seventeen years later. *Economics Letters* (2018), <https://doi.org/10.1016/j.econlet.2018.01.005>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- An easy and useful extension of Mitra's 2001 theorem on Li-Yorke chaos.
- An alternative proof of Mitra's 2001 result on the Matsuyama model as a corollary of a 1982 theorem of Li-Misiurewicz-Pianigiani-Yorke (LMPY).
- An application of the extended Mitra theorem to offer a generalization of a 2005 theorem of Khan-Mitra on the RSS model.
- An application of the LMPY theorem to offer a generalization of a recent result of Deng-Khan, and *a fortiori* of Mitra's result, on the Matsuyama model.
- Open questions and methodological concerns: the substantive difference between kinked and smooth maps, and the substitutability of "numerical proofs" for (formal and traditional) mathematical proofs as a result of high-speed computing.
