This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Bayesian Inference for Health Inequality and Welfare Using Qualitative Data**

Gunawan, Griffiths and Chotikapanich

MS#EL42920

**Highlights**

- Posterior probabilities for first and second order stochastic dominance.
- Posterior densities for any quality indexes for ordinal data.
- Results for Australian self-reported health data.
