This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- A calibrated 3-sector model can approximate the dynamics of large multisector models.
- The approximation entails matching moments of original price stickiness distribution.
- Result allows for estimation of DSGE models at reduced computational cost.
