This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

September 18, 2017

- Sen (2017) contains a new proof of Arrow's impossibility theorem.
- The proof assumes that the social preference relation is fully transitive.
- Sen's "Spread of Decisiveness" lemma can be used to prove Gibbard's oligarchy theorem.
- This lemma requires only quasi-transitivity.
- Arrow's theorem follows immediately once transitivity is strengthened.
