This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The objective of this paper is to contribute to the systemic risk debate by quantifying the risk contributions of major countries of the world.
- Systemic Important Markets are identified from a global view through the ADCC-CoVaR approach under skewed-t distribution.
- The developed markets contribute relatively more to the global systemic risk than the emerging markets.
- The contribution of Brazil is the second to the global system at times of distress, following the United States. While the systemic risk contribution of Japan is the least.
