This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We analyze the role of labor flows and demographics in structural change of employment.
- We explore evidence from all transition economies over nearly three decades, providing insights on the mechanics of labor force reallocation.
- Flows of workers between jobs are rare relative to the entry of youth and exit of elderly
- Speed of changing the ownership structure has driven exits to retirement.
