ABSTRACT

This paper examines the role of investments by angel groups across a heterogeneous set of 21 countries with varying entrepreneurship ecosystems. Exploiting quasi-random assignment of deals around the groups' funding thresholds, we find a positive impact of funding on firm growth, performance, survival, and follow-on fundraising, which is independent of the level of venture activity and entrepreneur-friendliness in the country. However, the maturity of startups that apply for funding (and are ultimately funded) inversely correlates with the entrepreneurship-friendliness of the country. This may reflect self-censoring by early-stage firms that do not expect to receive funding in these environments.

¹ Harvard University, MIT, Harvard University, and Bruegel. Lerner and Schoar are also affiliates of the National Bureau of Economic Research. Wilson is also affiliated with the Organisation for Economic Cooperation and Development. We thank numerous angel groups for their willingness to share data and their patience in answering our many queries. Excellent research assistance was provided by Secil Altintas, Jamie Beaton, Elaine Dai, Kenneth Fu, Ida Hempel, Zaahid Khan, Michelle Lin, and Ahmed Zaeem, and the research team at Baker Library led by Sarah Eriksen. Seminar participants at the Angel Capital Association, Boston University, the Interdisciplinary Center Herzliya, the Hebrew University of Jerusalem, London Business School, the National Bureau of Economic Research, Oxford University, Tel Aviv University, the Western Finance Association, and the University of Texas, and especially Shai Bernstein, Thomas Hellmann, Yael Hochberg, Arthur Korteweg, and Ramana Nanda provided helpful comments. We thank the Harvard Business School's Division of Research and the Ewing Marion Kauffman Foundation for financial support. All errors and omissions are our own.
