This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper makes the first attempt to empirically examine the effect of site value taxation on land value.
- It also explores heterogeneous impacts across different types of land use.
- Using unique panel data, this paper offers new evidence that two-rate property taxation raises land value per taxable acre and such impact differs across types of land use.
