This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Female participation rates differ significantly across regions within Japan.
- The participation rates have been low in urban areas and high in non-urban areas.
- The dispersion in female participation decreased from 1982 to 2012.
- Much of the convergence is due to changing composition of demographics.
