This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A cobweb price-adjustment process is generalized to a general equilibrium framework.
- The stability of a general equilibrium under perfect and monopolistic competition is studied.
- Under appropriate assumptions, the equilibrium of each economy is asymptotically stable.
- The stability conditions of the equilibria for these economies differ markedly.
