This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- The three “Slumps” were preceded by periods of major technological innovation.
- We estimate a model with noisy news using data from these three episodes.
- Beliefs about the long run adjust with a delay to permanent shifts in productivity.
- This implies similar productivity and consumption dynamics on a 20 to 25 year window.
- We emphasize a look at this data from the point of view of the medium run.
