This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We study the determinants of public debt when taxes are set optimally and the government has choice of enforcing private debt contracts
- With perfect enforcement, the level of government debt is indeterminate at all dates but the distribution of net assets is determined in an optimum competitive equilibrium
- Welfare is higher if private debt contracts are not enforced
