Abstract

Based on cross-country panel datasets, we find that (i) an increase in population share in agriculture is associated with poverty reduction once the longer- term poverty change or the dynamic is taken into account; (ii) rural non-agricultural sector also is poverty reducing in some

¹ This study is funded by IFAD (International Fund for Agricultural Development). The authors are grateful to Paul Winters, Thomas Elhaut and Rui Benfica for their enthusiastic support and guidance throughout this study and for their insistence on highest standards of analytical rigour. They also thank an anonymous external reviewer for IFAD for their useful comments. Gaiha acknowledges the support and guidance of David Bloom Harvard School of Public Health. The authors are also grateful to the comments from the editor and four anonymous referees for the journal. The views expressed are personal and not necessarily of the organisations to which we are affiliated or of IFAD.
