This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- Results show Portuguese labor market polarizing from mid 1990s
- Polarization in Portugal consistent with technological change - routinization
- Employment and wage premia increase for abstract tasks relative to manual
- Distinct employment and wage trends for routine cognitive and routine manual tasks
- Results point to a nuanced form of polarization in lagging developed economies
