This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights:

- 1 We consider the process of cascading failure in a host-router network model.
- 2 We employ a memetic algorithm to select the hosts' location for maximizing network robustness.
- 3 Based on characteristics of optimal configuration, we put forward a faster and effective method.
