This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

1. We provide an analytical approach to calculating the efficiency of complex networks.
2. We define the concept of “global connectivity” and “local connectivity”.
3. The proposed method is efficient in assessing the robustness of complex networks.
4. The proposed method reveals the relation between efficiency and connectivity.
