This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

An extended continuum traffic model with the consideration of the optimal velocity difference

De-li Fan^a Yi-cai Zhang^a Yin Shi^a Yu Xue^{a,b} Fang-ping Wei^a

Highlights

- 1) An extended continuum traffic model is derived from the microscopic model with the consideration of the optimal velocity difference.
- 2) The stability condition of this extended continuum traffic model and some special traffic models is discussed, respectively.
- 3) The local clustering effect resulting in stop&go traffic is studied by the numerical test.
