This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- We investigate the effects of node sampling on the influencer identification.
- The negative effect of biased sampling on the identification of influencers is small.
- A small sample size is enough for identifying influencers in social media networks.
- For some networks, node sampling is beneficial in the identification of influencers.
