This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

Title: Nonstationary transition to phase synchronization of neural networks induced by the coupling architecture

- Small-world and random network topologies are studied.
- Nonstationary transition to phase synchronization are observed.
- Recurrence quantification analysis are employed to quantify nonstationary behavior.
