

## Accepted Manuscript

Inferring driving trajectories based on probabilistic model from large scale taxi GPS data

Jinjun Tang, Jian Liang, Shen Zhang, Helai Huang, Fang Liu

PII: S0378-4371(18)30501-6  
DOI: <https://doi.org/10.1016/j.physa.2018.04.073>  
Reference: PHYSA 19505

To appear in: *Physica A*

Received date: 24 January 2018

Revised date: 1 April 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlight

We detect the stays based on status records in taxi trajectory.

Unique trips are extracted and recorded as data chain for learning process.

We use Hidden Markov Model to predict future driving path.

We apply Linear Motion Function to predict positions.

The testing results prove the effectiveness of the proposed prediction model.
