This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

HIGHLIGHTS

- Intelligent agents select after filtering out the in-neighbors of lower knowledge
- Knowledge spread is much faster, when agents implement intelligent selections
- Selecting after filtering is more effective than placing experts in key positions
- The position of the experts is less significant, if agents are intelligent
- The structure of the network is less significant, if agents are intelligent
