## **Accepted Manuscript**

Temperature is not an observable in superstatistics

Sergio Davis, Gonzalo Gutiérrez

PII: S0378-4371(18)30425-4

DOI: https://doi.org/10.1016/j.physa.2018.04.007

Reference: PHYSA 19439

To appear in: Physica A

Received date: 10 October 2017 Revised date: 5 February 2018

Please cite this article as: S. Davis, G. Gutiérrez, Temperature is not an observable in superstatistics, *Physica A* (2018), https://doi.org/10.1016/j.physa.2018.04.007

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## **ACCEPTED MANUSCRIPT**

- $^{\star}$  Superstatistical temperature distributions cannot be recovered in general by any microscopically observable estimator.
- \* Energy and temperature are not in the same footing as thermodynamical quantities when superstatistics is considered.
- $^{\star}$  Superstatistics is best understood as Bayesian thermodynamics with a unique but uncertain temperature.
