This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- A new alcoholism model on scale-free networks with community structure and voluntary drinking is introduced.
- Stability of all the equilibria of our model with two communities for some special cases are investigated.
- Numerical simulations are also conducted to explain and extend our analytic results.
