This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

## Highlights

- A novel Phytoplankton Zooplankton model with the impact of toxin is introduced.
- Stability of the positive equilibrium of the system is obtained.
- Numerical simulations and sensitivity analysis are performed.
- Our results show that toxin plays an important role on deriving the complex dynamics.
